FACULTY SPOTLIGHT

JAN SCHROERS

Professor of Mechanical Engineering & Materials Science

Jan Schroers's research areas include micro & nano Replication, MEMS materials & processes, amorphous metallic foams, bulk metallic glasses, bio-medical applications, net-shaping processing methods incorporating a wide range of length scales, and thermo plastic forming. The [Schroers Lab](#) is concerned with materials and their structure-processing-property relationship.

NEWS

PLAYING WITH GLASS SAFELY — AND MAKING IT STRONGER

Researchers at Yale have developed a way to alter the microanatomy of glass and measure how the changes affect the material's overall character — offering new possibilities for tailoring glass... [MORE »](#)
